

Adam J. Stewart

Chicago, IL 60622 | 614-716-8589 | adamjoesph111@gmail.com | Website: <https://beasterbro.github.io/P6/>

Software engineer proficient in JavaScript, Java, Python, and C# looking for opportunities to create consistent and clean code bases that generate meaningful output, while using strong communication and organizational skills to design, develop, and maintain software applications.

Experience

Full Stack Software Developer *Jan 2024 - Present*

TecAssured - Columbus, Ohio

- Acted as the primary engineer for two thirds of company's web features in a fast-paced startup
- Build and test a full-featured and flexible API for improved reach, resulting in 45% increase in clients
- Expand interface with Java-based RESTful endpoints to offer multiple integration options for better usability and easy adoption
- Improve portal response time from 35 seconds to 3 by streamlining core logic and removing inefficient code in Java, JavaScript, and SQL
- Collaborate with cross-functional stakeholders to establish project scope and define technical specifications

Software Engineer Co-op *Sep - Dec 2023*

CNH Industrial - Burr Ridge, Illinois

- Developed a backend for frontend (BFF) endpoint using .NET Core and C# as a troubleshooting tool for logging manufacturing issues
- Instantiated a dedicated GraphQL server on Azure to securely handle BFF requests
- Increased API security by 30% through reduced information leakage
- Applied Domain Driven Design (DDD) with ABP to support modular and speedy deployment
- Utilized Azure DevOps practices for task assignment and resource management

Software Engineer Intern *May - Sep 2023*

CNH Industrial - Burr Ridge, Illinois

- Designed Infrastructure as Code (IaC) proof of concept that reduced manual configuration by 50%
- Implemented a module-based declarative provisioning system with input validation, environment-based defaults, and parameterized naming in Terraform for 15+ Azure Resources
- Presented findings in a 20-minute demonstration, leading to a full-scale project adoption

Projects

- [Photo web app](#) - supports photo storage and sharing for 100+ concurrent users with JavaScript, SQL, and AWS
- [Logan Planner mobile and web app](#) - class planner powered by React, React Native, AWS DynamoDB, AWS Elastic Beanstalk, NodeJS, and Android Studio and hosting 120+ users at www.loganplanner.com
- [InTune web app](#) - generates playlists based on weather, time of day, and population using React and NodeJS
- Programming languages: Java, Python, C#, JavaScript, System Verilog, embedded C, and Arduino

Education

Northwestern University
MS Computer Science 2023

Case Western Reserve University
BSE Computer Science & Engineering 2021
