

Adam J. Stewart

Chicago, IL 60622 (614) 716 -8589 | adamjoesph111@gmail.com | Website: <https://beasterbro.github.io/P6/>

Looking to secure a position that will allow me to program software utilizing computer languages, such as JavaScript, Java, Python, and C# to create consistent and clean code bases that generate meaningful output. While using my strong communication and organizational skills to design, develop, and maintain software applications.

Experience

Full Stack Software Developer Jan 2024 – Present

TecAssured - Columbus, Ohio

- Leverage expertise in JavaScript HTML, SQL, and Java to maintain, monitor and enhance the web portal for TecAssured Services
- Design scalable software architecture and establish efficient data flow processes to seamlessly integrate between frontend, backend and external systems
- Conduct thorough testing and debugging while maintaining Git version control and comprehensive documentation
- Collaborate with UI/UX designers, product managers, and developers to translate requirements into technical specifications
- Partner with cross-functional business stakeholders to establish project definition and scope that enabled seamless integration
- Increase web portal performance by 40%+ by streamlining workflow and optimizing code base

Software Engineer Co-op Sep – Dec 2023

CNH Industrial - Burr Ridge, Illinois

- Developed a backend for frontend (BFF) endpoint using .NET Core and C# to create a troubleshooting tool for logging manufacturing issues
- Applied Domain Driven Design (DDD) with ABP to support modular and strategic software development
- Created, managed, documented, and tested a GraphQL server that handles BFF requests
- Used Azure Devops methodology for task assignment and resource management
- Followed standard Agile practices for planning and organizing deliverables
- Reduced API vulnerability by 30% through reduced information leakage

Software Engineer Intern May – Sep 2023

CNH Industrial - Burr Ridge, Illinois

- Designed a proof of concept to transition from manual resource creation to Infrastructure as Code (IaC)
- Implemented a module-based declarative provisioning system with input validation, environment-based defaults, and parameterized naming in Terraform and Microsoft Azure
- Reduced manual input by 50% through leveraging input validation for 15+ Azure Resources
- Compared 3rd party tools to leverage pros and minimize cons
- Collaborated with team members and stakeholders to meet business requirements

Projects

- [Web Service](#) - Leveraged SQL, AWS, and JavaScript to enable users to store, manage, download, and share photos while serving hundreds of users simultaneously.
- [Logan](#) - mobile and web service for students to plan and manage classes at www.loganplanner.com using React, React Native, AWS DynamoDB, AWS Elastic Beanstalk, NodeJS, and Android Studio which hosted 120+ users
- [InTune](#) - web app that generates playlists based on weather, time of day, and population density using React and NodeJS
- Familiarity with programming languages: Java, Python, C#, JavaScript, System Verilog, embedded C, and Arduino

Education

Northwestern University

Major: MS Computer Science

Graduated: 2023

Case Western Reserve University

Major: BSE Computer Science

Major: BSE Computer Engineering

Graduated: 2021
